

MAGNAFOLD STANDARD SINGLE OPENING DOOR PANEL CHANGE

Step 1: Prep the new panels:

Remove the panels from the box and let the material acclimate to the temperature of the room for about 30 minutes. Then unroll the panel(s) on a flat surface and let sit for a day. This step is not required but it will help the material stay flatter so you do not have to fight against the curl the material had when being shipped. This is also a good time to check the length of the panel and compare with your old panel. Shorten if needed with a utility knife, tin snips or heavy-duty scissors. Two people are recommended to change out these panels.

STEP 2: Remove Clips and Rollers

Tape over shower drain so you don't lose small parts. Remove the top rollers on both sides of the panel to be replaced. From inside of shower/tub unit, remove plastic clip from each roller set, then remove spring and roller assembly, carefully working the rollers out of the track. For a short video on how to remove/reinstall rollers, go here: <https://www.youtube.com/watch?v=NNKY5BRPDIs&t=2s>

STEP 3: Remove old Panels

Your door may have rivets in the ends of the aluminum hinges and lead posts. If so, you will need to remove them prior to replacing panels. They can be removed by sliding a flat screwdriver (or similar item) into the slot, then, using a hammer, tap on the side of the screwdriver to dislodge the rivet out the end of the slot.

You can then slide the panel out the top end of the frame, hinge or door lead post. Remove both sides of the panel at the same time. It works best if the panel is curved to a "U" shape when removing and installing. You may need to add some soapy water to help the panel slide along the frame. The second person will need to hold the loose door hinges or lead post while the panel is being removed and the new panel is installed.

STEP 4: Install New Panels

Lay the new panel out on a table. Make sure the natural curve of the panel is oriented to curve towards the inside of the door. Slide the panel into the wall frame, hinges or lead post of the door, installing both sides of the panel at the same time. This takes an extra set of hands. The lubrication you used to remove the panel may need to be added to help slide the new panel in place.

Step 5: Installing rollers

Once the panels are in place, insert the aluminum pop rivets (optional) in the ends of the hinge and lead posts. Pop rivet tools can be found at most hardware stores. Rivets are 1/8" rivets. If any part of the rivet mandrel is not flush with the rivet, it can be tapped with a small hammer until flush. If needed, review the roller removal and installation video listed above. Install the single roller in the lead post and the double roller on the hinge. Gently work the rollers into the track before inserting spring and roller into the hinges and lead post. Snap the plastic retaining clip onto the roller body after the roller is in the track, spring is in place and roller body is through the hinge or lead post.

Do the same with each additional panel that needs to be replaced.

Check to see that all rollers are properly aligned in groove. Lube roller rail with silicon spray as needed.

SHOWER SOLUTIONS USA

402-245-3419

By Alien Innovations, LLC

www.showersolutionsusa.com

LIMITED WARRANTY

Shower Solutions USA products have a one (1) year warranty from date of delivery. You must notify us within 3 months of delivery if box was damaged during shipping or if any part(s) were broken/missing during shipping. The shower doors and panels are warranted to be free from defects in material and workmanship.

Replacement is limited to supplying part(s) and does not include cost of shipping, installation, or other associated costs.

MAINTENANCE

Shower Solutions USA shower doors should be rinsed and wiped off immediately after cleaning. Use cleaning agents compatible with product material. The aluminum frame and hinges are made from anodized aluminum; the panels are made from either TPO or PVC. Use cleaning product safe for plastics. Use of inappropriate cleaners will void warranty.
