

4-Y

Defoamer

DESCRIPTION:

4-Y is a water emulsion containing a siloxane and an anionic emulsifier. It will prevent and destroy unwanted foam in many industrial applications.

USE RECOMMENDATIONS:

Use 4-Y as is or diluted to meet the needs of the application. This will depend on the type, amount and conditions of foam generation. A little goes a long way so start small and add more if needed.

SPECIFICATIONS:

BCS 4-Y Defoamer is a white, water thin emulsion with a pH of 9.0 to 9.5. Some slight separation might occur on long storage so mix well before drawing off from containers.

For additional information such as physical characteristics, safety precautions, disposal, etc., see corresponding SDS.
