

Greg's World – An Introduction

By Program for Extraordinary Experience Research (PEER)

“Greg's World,” presented as an Adobe Acrobat (.pdf) file, is a report by an astrophysicist from a noted east-coast university (and colleagues) who attempted to determine whether the description of an alien world as perceived by an “experiencer” of alien contact would be fraught with irreconcilable errors; the expectation being that errors would suggest that the perceptions of an alien world were simply fantasy.

This report was originally presented on the website of Dr. John Mack's organization by arrangement with the astronomer, who approached Dr. Mack's organization with the report and asked to remain anonymous. It is reproduced here by permission of all parties.
