

# Help Protect Your Business From Cyber Threats

Maximize your productivity and minimize your worry.

Businesses today — no matter their size — need to help keep their data and electronic devices secure. If you don't, you risk becoming the target of a cyber attack.

## The threat is real

55% of small businesses have had a security breach<sup>1</sup>

## Still, many ignore the problem:

45% aren't concerned about data security on wireless devices<sup>3</sup>

## What threatens your company?

## Don't become a victim.

Take measures to protect your systems so you can focus on growing your business.

### • Block malware

Guard against cyber threats and monitor your network security

### • Thwart attacks

Prevent malicious traffic, such as viruses and distributed denial-of-service (DDoS) attacks, from infecting your network

### • Safeguard data

Store data to an online storage cloud so you can access files from almost any web-connected device

### • Secure mobile devices

Help keep data secure without compromising productivity, even on employee-owned devices

### • Restore your network

Get your system back up and running in no time

## Let AT&T help.

AT&T offers a full suite of services that can help your business stay virus-free and protected from cyber attacks. > [Learn more](#)
