

“The Solution Is Science®”

Formulating advanced chemistry and lubricant solutions for the metalworking industry. Products proven to improve manufacturing performance, part quality and cost savings!

CORROSION INHIBITORS

Consultant Lubricants, Inc

1206 Corrosion Inhibitor

Long Term - High-Performance

- 1) Penetrating Liquid** - High “wetting” performance allows this product to lay down and spread into hidden area via capillary action. Provides complete coverage whether dipped, brushed, or spray applied.
- 2) Long Term Protection** - After dry, typical corrosion protection for white or red rust is roughly 2 years indoor protection or longer depending on ambient conditions.
- 3) Multi Metal Protection** - Whether applying inhibitor to prevent white rust on aluminum or red rust on iron and steel materials, this product will resist corrosion from forming.
- 4) Ease of Removal** - Unlike common oil based inhibitors, the dry film residue virtually non-detectable and is easily removed in typical Pretreatment Systems prior to paint/coatings application. Product will not contaminate wash bath or cause fish eyes in paint/coating systems.

1206 is a high performance, long-term corrosion inhibitor. It contains a non-hazardous solvent carrier to provide ease of application and quick evaporation. It will protect from corrosion on all metals and alloys including steel, aluminum, and yellow metals.

1206 provides water resistant protection during open-air transportation or when storing parts outdoors. Expect 6 months outdoor protection and over 2 years protection indoors.

1206 will not rinse away in “wet” weather, but the 1206 protective film is easily removed with typical pretreatment systems parts washers. Or, it can be wiped off easily with petroleum solvents such as mineral spirits.

1206 Corrosion Inhibitor does not irritate the skin and produces only a slight odor.
