

## Titan Ultra Growth (Formerly Aggressive Growth)

March 31, 2018

### Investment Philosophy

We believe that a tactical investment approach which adapts to the current market environment is superior to traditional strategies that subject investors to large losses. Our strategies seek to participate in up markets while protecting capital during down markets. We use proprietary quantitative models to remove human emotions from the investment process and objectively navigate the global financial markets.

### Strategy Objective

The Titan Ultra Growth Strategy seeks to generate above market returns with less downside volatility than the broad equity market over a full market cycle. The strategy includes multiple models and primarily invests in stocks using ETFs. The strategy may have some exposure to leveraged ETFs when fully invested. There are no fixed allocations to any asset classes. The strategy has the ability to allocate up to 115% in stocks and 100% in cash.

DISCLOSURES

Titan Capital Management, LLC is a registered investment advisor. Performance results are presented in U.S. dollars and are net-of-fees and trading expenses and reflect the reinvestment of dividends and capital gains. The applicable fee schedule is 1% on the first \$2 million and 0.75% thereafter. Actual fees may vary based on the nature of the relationship and there may be certain accounts included in the composite that do not pay fees. Including non-fee paying accounts in the composite performance may result in higher performance than if the applicable fee schedule was applied to all accounts. Backtesting is used prior to 12/31/2014 with a 1.25% annual fee. Backtested performance is not an indicator of future actual results. There are limitations inherent in hypothetical results particularly that the performance results do not represent the results of actual trading using client assets, but were achieved by means of retroactive application of a backtested model that was designed with the benefit of hindsight. The results reflect performance of a strategy not historically offered to investors and do not represent returns that any investor actually attained. Backtested results do not reflect actual trading, or the effect of material economic and market factors on the decision making process, or the skill of the advisor. A single test account was used in the composite for 2015, client accounts were added thereafter. Portfolios in the composite utilize leverage index products. Leveraged ETFs are considered risky. The use of leverage strategies by a fund increases the risk to the fund and magnifies gains or losses on the investment. Due to the effect of compounding, their performance over longer periods of time can differ significantly from the performance of their underlying index or benchmark during the same period of time. The S&P 500 Total Return Index is an unmanaged index consisting of 500 common stocks with dividends reinvested and is provided as a representation of the US stock market for informational purposes. Titan believes that the performance shown was generated with an investment philosophy similar to that described in the Titan brochure. Changes in investment strategies, contributions or withdrawals may cause the performance of your portfolio to differ materially from the reported composite performance. The information in this report is believed to be reliable, but this is not a guarantee. Past performance does not guarantee future performance. To receive a complete list and description of the firm's composites, please contact the firm at the address listed.
