Placidus
True Node

Venus comes to the midpoint of Uranus/Neptune

. To quote Bernadette Brady

“A most peculiar eclipse family, heralding an acute time of confusion in personal relationships, unexpected happenings in financial matters and possible illness. No important decisions should be made as there is too much confusion and possible delusion.”

I'd like to add that Venus also comes to the midpoint of Saturn/Uranus suggesting the breaking down of traditional rules, tensions or stresses in love life often leading to separations and financial melt downs and losses.

This state of confusion can be exacerbated with transiting Mercury turning stationary retrograde on the 24th November, when methods of communication and trade can go haywire. Be on guard for unstable conditions and confusing news.

I've plotted past eclipses belong to Saros 123 on the Dow quite a few of them have been low points in the market.
