

### EROS CUBE SPEAKER

Alderwood's tiny cube speakers deliver crisp full sound to every inch of your room large or small.

Developed over many years by one of Australia's leading acoustic engineers, they are the most powerful cube speakers for their size in the world thanks to our proprietary technologies.

They are also incorporating cutting edge Constant Throw Technology which provides unparalleled vocal realism and projection allowing a small speaker to more evenly cover large areas and maintain even sound levels using less speakers even at the back of large venues. A wide 100 degrees conical coverage and exceptional off axis response ensures everyone enjoys the sound wherever they are sitting.

### SPECS

DC protection

Capable of up to 103db@1meter max without high pass, higher levels can be achieved with the use of high pass filters or bass cut settings

Frequency range 150-20,000 hz

Sensitivity 87db

Instrument grade birch timber

7x7x7cm and weighing in at only 250grams

Fire info: Flash temp 450 degrees Celsius, time 7 minutes

Available in 2 versions, ip63 and a completely sealed ip66 marine model

High resolution sound. Rapid transient response allows for every detail to be revealed

Exceptional throw, effective out to 32 meters and beyond

Wide coverage. A single cube projects 100 degrees in a conical pattern

Seamless blending. Whether placed 10 meters apart or only 2 meters, the cubes will blend and create a seamless cohesive sound wave

Exceptional off axis response.

Billet machined brass wall mount allows for fast, neat speaker mounting
