

Digital X-rays

It is important to know that your doctor is keeping up with the constant and rapid advancements in modern technology. Digital x-rays are just one more advantage you will have at your disposal when you visit our office. Instead of using a conventional film, we use a special computer sensor which puts the x-ray picture directly into the computer and which allows us to reduce the amount of harmful radiation by nearly 90%. Since the pictures are in the computer, we can enhance the images to better diagnose conditions--often before they become problems. This proves to be much more convenient for you because the x-rays can then be displayed on the computer right in front of you!

Patient Benefits

- Less exposure to radiation
- Faster turn-around time
- Shorter appointments
- Involvement in co-diagnosis
- Improved understanding of the treatment options
