

# “The Solution Is Science®”

Formulating advanced chemistry and lubricant solutions for the metalworking industry.  
Products proven to improve manufacturing performance, part quality and cost savings!

INDUSTRIAL CLEANER

Consultant Lubricants, Inc

## *K115 Mild Alkaline Cleaner*

### *Multi-Metal Formula*

- 1) Thorough Surface Cleaning** - Dirt, oil, grease, wax and rust repel surface coatings and paint. Our pre-treatment cleaners prepare metal surfaces for uniform coverage of paint, coating or plating.
- 2) Removal of Surface Coatings** - Primers, paint and other chemicals can prevent proper adhesion to metal surfaces. Complete and even removal is achieved in preparation for finishing stages.
- 3) Reduce Surface Static** - Electrostatic interference is a common challenge for metal surface adhesion. Thoroughly cleaning is required to have none or to have an even electrostatic charge.
- 4) Minimize Surface Defects** - Uneven surfaces or flaws in material consistency can be the cause of uncoated patches or gaps. Proper pre-treatment enables these areas to receive uniform coverage.

K115 is a heavy-duty, liquid, neutral cleaner designed to remove all types of soils from all substrates.

K115 will typically remove cutting oils, drawing and stamping compounds, coolant residues, smuts, dirt, and metal fines.

The particular wetting agents used in K115 provide fast wetting and lead to loosening and dispersing of soils and oils.

A major use of this product is with Aluminum in the Aero-Space Industry.

As a microfilterable product, it provides a non-etch, non-silicate cleaner for most soils.
