CON•PAK

Since 1973

The CON-PAK line of condensing unit enclosures has provided outstanding equipment protection in all types of weather.

Constructed of G90U Galvanized material for long lasting durability, the ECO Series is designed for quick assembly and easy access to installed equipment for repair work.

CON-PAK enclosures are also customizable and can be produced in Stainless Steel or Aluminum. Powder coating is a popular option for installations that require the enclosure to blend into its surroundings.

The ECO Series enclosure is designed for easy access for repair or inspection.

All units have a solid, galvanized steel base.
