

## What Does Quantum Consciousness Have to Do With the Apollo Space Program?

**Join us to mark the 40th anniversary of the first lunar landing on July 20, 1969 by watching a DVD of a fascinating talk by Apollo 14 Astronaut Dr. Edgar Mitchell.**

On his way home from the moon to Earth, Dr. Mitchell had a transcendent experience — called Samadhi in Sanskrit — in which he saw the universe in its separateness but experienced it in its unity with bliss. This profound event turned the explorer of outer space into an explorer of the inner space of consciousness. Dr. Mitchell's research is changing our view of the universe and of ourselves fundamentally. This is an evening you won't forget.
