## 6609 Penetrating Dry Film Lubricant

*Nano Chemistry - Multi-Metal - Dry Film*

- 1) Nano Chemistry** - Penetrating lubricant at the nano level to free up frozen parts.
- 2) Metal to Metal Protection** - excellent for hinges, reels, guns and wherever a long-term lubrication solution is required. Perfect for quieting “squeaky” metal on metal hinges and components.
- 3) Dry Film** - After evaporation 6609 provides a continuous dry film.
- 4) Counteracts Rust** - Restored parts are freed up while coating prevents corrosion.

The base vehicle of 6609 Penetrating Multi-Metal Dry Film Lubricant will evaporate leaving behind a tenacious solid lubricant film. This film will penetrate metal surfaces for effective lubrication over all metal to metal contact surfaces.

Ideal for use on reels rods, hinges, bearings, conveyor chains and any type of frozen part. 6609 penetrates and evaporates leaving behind a high performing nano film for long term lubrication without the mess.

This formula has extreme psi film strength, restores frozen or squeaky parts while counteracting rust. 6609 will offer excellent lubrication at temperatures up to 700 degrees Fahrenheit.

The formula should be agitated to a uniform consistency before application. It can be applied by spray, brush, or dip, whichever method is most suitable for the job. Automatic spray applications should be equipped with a continuous mixing of lubricant in the oil reservoir.
