

*FIRST Lego League Jr.*

*FIRST LEGO League Jr. will meet after school biweekly October 2020 - March 2021*

FIRST Lego League Jr. in Minnesota is a kindergarten through fourth grade non-competitive program designed to help students discover how science and technology influence the world around them. First Lego League is an international robotics program spanning 13 countries. Teams of students are challenged by FIRST with a real-world problem and guided by coaches to research, design, build, and code motorized model solutions out of LEGOs. Students document their learning in the form of a "Show Me" poster. At state events students share their models and learnings with expert adult reviewers. This program is the first level in LEGO Robotics Competitions. It is a fun way to encourage the development of creativity, problem solving, and public speaking skills.
