

Blockchain Implementation

Interoperability, Scalability, AI ~ Latest Developments & Challenges

14 May 2018 • Rise • London

BLOCKCHAIN: A topic discussed widely, in our **After the Bell** forums and globally in hundreds of conferences, panels and workshops. What has become a driving issue for blockchain is the **importance of interoperability and scalability to set industry standards that ensure the protocols work together**. With exchanges implementing bitcoin trading and the continued acceptance of cryptocurrencies along with many possibilities of blockchain technology, including AI projects, it is becoming **ever more urgent** to understand what needs to be in place to assure a successful outcome.

This panel addresses the need to know issues now. Join us in **London in May – After the Bell** events are not recorded so to get the most out of them – **be there!**

Topics addressed include:

- ❖ **Bitcoin Trading:** Where are we at and how does that affect blockchain? Will other cryptocurrencies be added in the future?
- ❖ **ICOs** - is their time over or just beginning?
- ❖ **Implementing blockchain** – real cases, latest developments & future possibilities including AI
- ❖ **Regulatory issues:** How do you maintain anonymity while creating regulations based around transparency?
- ❖ **Analyzing** overall risk

Panelists:

Maksim Akulsin, Architect/Co-Founder
eCoinomic

Steve Garrod, Chief Commercial Officer
Insightful Technology Group

Steven Garner, Founder & CEO
Grandeo Labs

Harsh Jani, Business Development
Wanchain Foundation & CEO, CryptoFyre
