

# “The Solution Is Science®”

Formulating advanced chemistry and lubricant solutions for the metalworking industry. Products proven to improve manufacturing performance, part quality and cost savings!

CORROSION INHIBITOR

Consultant Lubricants, Inc

## 1273 Extreme Corrosion Inhibitor

*Solvent-Based*

- 1) Penetrating Liquid** - 1273 penetrates and displaces moisture, after evaporation (1-2 hours), the dried film seals and “deactivates” metallic surfaces from forming red or white rust.
- 2) Uniform Coverage** - 1273 penetrates and wets out onto the surface quickly. These properties give you the necessary uniform coating. Dried film will not flow or drip post application.
- 3) High Moisture Resistance** - Upon evaporation, the resulting film is highly resistant to salt water, salt spray, water, and humidity.
- 4) Ease of Removal** - 1273 is non-staining. If painting will occur later, 1273 is easily removed with Mineral Spirits or Heated Alkaline Cleaner. Contact your Sales Representative for a compatible cleaner recommendation.

1273 is a high performance corrosion inhibitor formulated for long term protection from “red” and “white” rust on all metal surfaces. 1273 is solvent based for excellent surface wetting and water displacing properties. When applied prior to forming operations, 1273 provides excellent lubrication for forming and/or cut off tooling.

Application: 1273 may be sprayed on, rolled on, brushed on or fully immersed depending upon each application’s particular requirement. Cover immersion tanks to prevent evaporation.

This product does not promote skin irritation and is low odor providing high operator acceptance.
