

RATE CONVERSION CHART

ProNuCur HY

For bulk soil application: Apply on a 1.0 to 3.0 % weight/weight basis (i.e., 10 to 30 Lbs. ProNuCur HY for 1000 lbs. of soil, 10 to 30 grams per kilogram of soil.

For homeowner use: Apply one pound of ProNuCur HY for every 100 square feet of soil. One 20 pound pail of ProNuCur HY will cover approximately 200 square feet at an application rate of 1 ton per treated acre on a broadcast basis. For bulk soil treatment, apply approximately 1 to 3 Lbs ProNuCur HY per 100 Lbs of soil.

For broadcast application: Recommended application rates are approximately 1 to 3 tons per acre on a broadcast basis (or 4.5 to 14.0 pounds per 100 square feet).

1 teaspoon equals .10 ounces

1 tablespoon equals .45 ounces

Application rates will vary according to the characteristics of the soil, types of plant-pathogenic nematodes, and extent of infestation.

Acid soils (Le. lower pH) or soils with a severe degree or type of infestation (e.g., root-knot nematode) will require the higher rates of application within the specified ranges.
