

The Mindshift Institute Presents Alexander Imich Lecture **Global Warming and the Planetary Emergency**

Wilhelm Reich's Weather Engineering Work: Its Present-Day Implications and Applications

Conny Huthsteiner, MD

Vice-president of the Institute for Orgonomic Science

In his last work, *Contact with Space*, published posthumously in 1957, Wilhelm Reich described in great detail his pioneering weather modification work in the desert region of Arizona outside of Tucson from November 1954 to March 1955. Reich reported on both the details of his weather engineering or cloud-busting operations and the theoretical underpinnings of his projects in this book and in the *Orgone Energy Bulletin*. Her talk could not be more relevant in light of the climate change crisis we are facing.

Dr. Conny Huthsteiner has revisited this little-known scientific effort and uncovered both confirmation of Reich's reported data and discovered exciting new information published for the first time in the *Annals of the Institute for Orgonomic Science* in her article "Weather Engineering in *Contact with Space: Global Warming and the Planetary Emergency*."

Based on her study of orgonomy, Dr. Huthsteiner has concluded that Reich's warnings 50 years ago of a "planetary emergency" due to climate change were amazingly prescient and that his work on weather modification has valuable implications and applications for us today. A re-examination of Reich's cloud-busting project could be invaluable for healing what has been damaged on Earth as well as for maintaining the health of our planet in the future.

Join us for a unique evening in which Dr. Huthsteiner will share with us what she has come to understand about the crucial weather engineering Reich did in Arizona at a time in which McCarthyism plagued the nation; the US government was exposing Americans to radioactive fallout from above-ground atom bomb tests; and the National Security State was emerging. Reich's radical medical and scientific work threatened the power structure and resulted in *male fide*, even unconstitutional, legal actions against him that led to his tragic death in a Federal prison. As a result, his enormously valuable work was stopped dead in its tracks. Can we begin to move forward again with this life-saving work—now—before it is too late?

Tuesday, February 12 at 7 pm

The Pratt Mansions 1026 5th Avenue at 84th Street

Admission: \$20

Early Registration Suggested for This Popular Evening
THE MINDSHIFT INSTITUTE

Dear Mindshifter,

We are very happy to be writing to you about *The Fifth Annual Alexander Imich Lecture*. We are celebrating **the 105th birthday of Alexander Imich, PhD** and honoring him for over 70 years of work as a pioneer and leader in the study of anomalous phenomena. Join us at **The Pratt Mansions, 1026 Fifth Avenue at 84th Street on Tuesday, February 12 at 7 pm**. We are excited to have as our guest speaker this year **Dr. Conny Huthsteiner**, the author of an important article on weather engineering published in the *Annals of the Institute for Orgonomic Science*. Her information on weather modification could not be more relevant in light of the climate change crisis we are facing.

Dr. Huthsteiner is the vice-president of the Institute for Orgonomic Science and a psychiatrist and medical orgonomist in private practice. She studied medicine, and trained in psychosomatic medicine, at the University of Munich, Germany. She also trained at the Mayo Clinic and Boston University. For many years, she was Staff at Harvard Medical School. She is planning, with Dr. Ron Maio of University of Michigan, an experimental clinical trial on the use of orgone energy blankets on burns. She has also written a feature screenplay about Wilhelm Reich.

At present, persistent drought is plaguing much of America and the world. Deserts are growing worldwide at an increasingly rapid pace. Forest death is a global threat to our survival. Aquifers are drying up and fresh water is becoming increasingly scarce, even as the great glaciers of the planet melt, along with the ice sheets of the Arctic and Antarctic. Over 50 years ago, Wilhelm Reich wrote about forest death, the desertification of the earth, drought and climate change. But he did not just write about it. He devised a weather modification technology based on his knowledge of the atmospheric orgone energy, and designed experiments to try to reverse these processes in nature and return the atmosphere to a healthier state.

Over the years since Reich's death, many scientists and naturalists have applied his atmospheric work responsibly in the USA, ending severe regional droughts and engaging in significant desert-greening experiments -- but they have mostly been ignored or professionally attacked for their efforts, even while occasionally being supported at the highest levels when doing similar work overseas. Dr. Huthsteiner has revisited Reich's ground-breaking weather engineering work, which was conducted in Arizona in the winter of 1954-55, and put together a detailed analysis of his efforts. It is her fervent hope to re-introduce this crucial body of work to a new generation of researchers, as well as to the general public, so that its great potential for helping us in our current climate crisis might be recognized.

Dr. Huthsteiner has written, "Reich was a revolutionary in his holistic understanding of the body, intellect and emotions in the field of medicine. His ability to understand the physical world in terms of life and the living was unique." Reich understood deeply the interrelatedness evident throughout nature and saw the cosmic orgone energy as the underlying primordial field that was the ground of this interconnectedness. Reich recognized similar functions in realms kept apart by mechanistic science, such as in the healing of individuals and healing of the atmosphere. This understanding of the unity present in nature is needed more than ever as we grapple with both the outer desert on our planet and the inner emotional desert of mankind.
