

THE FULL EXTENT: AN INQUIRY INTO REALITY AND DESTINY

A Book Announcement

In the early 20th century, discoveries in quantum mechanics - specifically the double slit experiment - proved Consciousness is the ground of all being. This finding contradicted scientific materialism, which posited matter as foundational; instead, matter results from Mind. Moreover, Consciousness was antecedently linked to a First Mind, the universe a mental and spiritual construction of a Divine Being.

The Full Extent expands on these quantum truths and considers their spiritual implications, positioning the human future. It is a heady blend of cutting-edge theory and timeless musing, an epistemological thesis is a mind-expanding thrill. This book points one in many directions because it is truly integrative, and futures require exactly that type of thinking.
