

## Consciousness and Mind Without Brain

**DVD: Talk by Dr. Jenny Wade**

**Wednesday, July 29 at 7pm**

**Center for New Knowledge**

**Northampton, MA**

Mind without brain is a scientific conundrum. Is there awareness without a functioning brain? Does consciousness predate birth? Can consciousness survive death? **Dr. Jenny Wade**, author of *Changes of Mind: A Holonomic Theory of the Evolution of Consciousness*, believes a cosmology is needed that accounts for consciousness and that can help answer such questions. The questions that Dr. Wade examines cannot even be asked in the present mechanistic-materialist paradigm. Such phenomena are by definition not possible. But when seen in a different context, we can come to a new understanding of these phenomena and expand our picture of reality.

Dr. Wade will share with us her insights into consciousness before birth, in utero, at birth, and after physical death. Evidence of a physically transcendent source of human consciousness comes from the extremes of the life span when the brain and central nervous system are unable to function, according to most standard measures. For example, verified evidence substantiates that the fetus is aware, able to recall, and is affected by events around it inside and outside the womb. Verifiable fetal memories go back to the moment of conception. Likewise, near-death accounts have verified awareness when the individual's measurable brain activity had ceased altogether. We hope you can join us for an

evening of expansive exploration.
