WHY TRAIN WITH AUTOSYSCON?

Our instructors have actual hands-on experience in several industries. As a student, you get the benefit of the experience the instructors have gained during their careers!

We teach the students the basics of system concepts, peripheral controls and sensing devices. By the conclusion of the course, each student will have a functional understanding and the ability to create basic programs using Ladder Logic.

These newly gained skills will provide the foundation necessary to work with nearly every manufacturer's Programmable Logic Controllers (PLC's).

DETAILS

01 HANDS-ON EXERCISES

There are 17 custom created exercises designed to give the student the experience of actually coding a PLC.

02 24 HOURS OF TRAINING

Typically the classes are divided into 4 hour segments conducted over 3 days.

03 CLASS SIZES - 4 TO 10

With a minimum of 4 students, we can provide training at your facility. Participation in the class for less than 4 students can be accommodated by signing up for an off-site class. Students from other companies can essentially share the burden of minimal student count.

04 LOW COST- HIGH VALUE

Our PLC Basics course open a gateway to better equipment maintenance, operational understanding, and reduced down-times. Prices start at \$997 per student for the complete course.

05 FREE USB DRIVE

Every student receives a USB Drive containing all the course material. It can be reviewed and studied anytime the student wishes.

EDUCATION ASSISTANCE

This course is eligible for CEU credits and other college credits. Contact us for details.

If your company requires financial assistance, we have several options we can pursue.

Give us a call and we can get you started.
