

Blockchain & AI

A Technological Collaboration

June 12, 2018 • Chicago

AI & Machine Learning: These applications have been extraordinary and its continuous rise and acceleration gives promise to the delivery of major value across a variety of applications in many industries. Relying on vast amounts of data, the challenge is that this very data is spread out across organizations in multiple silos. Sharing is limited or nonexistent resulting in the fact that the value of AI cannot be fully realized.

Blockchain and smart contracts enable secure and efficient data sharing and processing across B2B networks. With the collaboration of **AI and blockchain**, this could pave the way for increased and easier access to data and provide a foundation delivering full value.

Join us in **Chicago in June**—these **After the Bell** events are not recorded so to get the most out of them – **be there!**

Topics addressed include:

- Defining how AI will enhance blockchain
- Enabling interoperability, scalability and data-sharing
- Leveraging unstructured data and extracting information from dark data
- Defacto transaction security
- Regulations & guidance
- Industry vertical applications: Finance, Healthcare, Supply Chain and more

Panelists:

Kate Besser, Co-Founder, **Speciate AI**

Matt LeFrandt, CEO, **CryptoCombine**

Parker Holcomb, CEO, **Fraight AI**

Thierry Hubert, Founder & CEO, **Darwin Ecosystem**

Facilitator: Stacey Mankoff, Managing Principal, **The Mankoff Company** & Founder, **After the Bell Events**

Venue:
Fine Arts Building
410 South Michigan Avenue, #410
Chicago, IL 60605
