One Spirit

247 W. 36th St, 6th Floor (Between 7th-8th Avenues)

***A Celebration of the Life and Work of the
Late Apollo 14 Astronaut
Dr. Edgar Mitchell
(September 17, 1930-February 4, 2016)***

"What we can now say, because of the Quantum Hologram, is that we live in a universe that is a self organizing, intelligent, creative, learning, interactive, participatory, non locally interconnected, evolutionary system."

--Dr. Edgar Mitchell

***Nature's Mind and the Quantum Hologram:
Connecting Cosmos and Consciousness***

Join us for a celebration of Edgar Mitchell's contributions to creating a better world and an exciting exploration of a new "WOW!" discovery in science--the **Quantum Hologram**. It is functioning in the human mind and in our universe.

In 2003, Dr. Mitchell and Harvard-Smithsonian astrophysicist Dr. Rudy Schild spoke at Mindshift's first annual conference in Rangeley, ME. In 2007, they both participated in our annual conference again. In the four years between those two events, they and their colleagues made extraordinary discoveries. We will share with you their revolutionary findings.

Dr. Mitchell reported on the Quantum Hologram in a paper entitled *Nature's Mind*. And Dr. Schild and his team made astronomical observations, published in the top astrophysical journal, suggesting that the mysterious Black Holes which intrigue so many are not at all what we think they are. They called their discovery MECOs--Magnetic Eternally Collapsing Objects.

Dr. Schild also saw an unexpected connection between MECOs and the Quantum Hologram. He told us privately, "I think we have discovered a structure in the universe that is like a memory membrane of Nature's Mind."

The implications of these new findings are astounding and change our understanding of consciousness; perception and self-perception; the nature of life in our universe; and of our participatory place in it. We look forward to seeing you there.
