About Turbo Systems

International Turbo Systems Inc., (Turbo Systems) is a consulting company specializing in Information Technology Support, Database Integration, and Facility Support. The principals of Turbo Systems are software development, project management, and change management consultants to the Department of Justice (DOJ) Justice Management Division (JMD). These consultants formed Turbo Systems Inc., to synergize their respective knowledge bases in an effort to continue maintaining expert level services to government agencies while providing new employment opportunities for information technology specialists and other skilled workers.

Turbo Systems originated as a Broward County, Florida corporation in 1995 through its sole principal owner Kathleen Holley.

Turbo Systems Specific Area of Expertise

- Software Development
- Database Migration
- Change Management
- Helpdesk Support
- Facility Support

Turbo Systems offers its clients, effective, efficient, and reliable alternatives to in-house resources for information technology services, database management, and facility management. Turbo Systems has provided the DOJ competent, qualified, and knowledgeable, experts, managers, technicians, and support staff to resolve and manage various aspects of their information technology objectives and facility support service needs.

Turbo Systems' readily available pool of consultants and employees is comprised of database administrators, project managers, change management consultants, IT security consultants, helpdesk management consultants, software testers, software developers and other skilled workers.

Current Projects Include:

- Turbo Systems currently assists the Department of Justice Office of Debt Collection Management (DCM) in the technical support of the Consolidated Debt Collection System (CDCS). Turbo Systems' Technical Subject Matter Expert (SME) performed requirements and design reviews during the implementation phase of CDCS. The SME participated in CDCS user acceptance testing and provided recommendations on key

go/no go criteria for financial and technical areas, and developed CDCS reports used by DCM management for analysis and trend setting.

- Turbo Systems personnel work with DCM management to help troubleshoot current technical and operational issues related to the CDCS deployment. Turbo Systems provides quality control procedures including daily audit reports on key interfaces between CDCS and FMIS DMM as well as reconciliation and audit support for all payment information contained in CDCS and FMIS DMM.
- During post implementation of the CDCS system, Turbo Systems was tasked to serve as a liaison between the CDCS contractors and the DAOG for the purpose of identifying and resolving all outstanding technical issues that existed between the two systems. Turbo Systems was able to quickly assess and report on the end-to-end functionality of the CDCS and DMM interface. Turbo Systems created and established Quality Control processes that are executed on a daily basis so that errors that previously caused system failures are identified and corrected on a timely basis.
- Turbo Systems is currently supporting the DOJ Debt Collection Management Division by analyzing existing and proposed systems and processes in order to make the best technical recommendations; creating audits of financial transactions and developing suggested solutions to problems to improve financial integrity; reviewing and making recommendations on internal controls documents and processes, reviewing financial reconciliation documents and processes; working with the operations and technical staff to create, optimize, and document business processes and procedures; developing reports based on end-users and management needs.

Recently Completed Projects Include:

- Turbo Systems' work on the Automated Debt Collection Management Project (ADCM) included support for development, implementation, and maintenance of the CLASS system, one of the primary legacy systems used by the DOJ Debt Collection program until September 2007. Turbo Systems' support was of critical importance during data conversion and roll-out, and this experience will significantly benefit the JMD as it is still adapting to the new requirements of the CDCS system. In addition to system support and computer operations maintenance, Turbo Systems provided support in data processing, financial operations, help desk assistance, user training, configuration management, facility administration, and facility security, computer security, and personnel security. Turbo Systems assisted the prime contractor in the day-to-day

operations of the Case Processing and Financial Operations functional areas at the Nationwide Central Intake Facility for over ten years.

Turbo Systems Ratings

Turbo Systems services have consistently received superior performance ratings from its primary customer, the DOJ Debt Collection Management (DCM) division. Turbo Systems competes against employment agencies, temporary agencies, and recruiting agencies, yet Turbo Systems employees and services continue to deliver the preferred vendor status with the larger government contractors.
